

Earthquake Restraints

What items really need earthquake restraints?

- Items must be restrained if they are located on a surface at least 3 ft from the floor and will either block egress or injure someone if it fell.
- Open shelves must have a 3/4" high lip or applied device (bar/chain) that restrains objects on the shelf.

- All bookcases, filing cabinets, racks, shelves, and storage cabinets 3 feet tall or more must be secured regardless of location.
